PREFACE

This book of plates in cabinet-making is the result of seven years' experience in the teaching of this subject to high school and evening school classes. These plates are arranged to cover the subject from a practical point of view — a view suggested by careful observation of the needs of day and evening school classes in woodworking. It should not be regarded as a text-book, but simply as a collection of practical problems in cabinet-making, which can be adapted by any teacher to any course he may be using.

The author believes that this book will be of great assistance to all instructors in cabinet-making, but especially to those who have just graduated, as the latter are generally insufficiently supplied with designs in this branch of woodworking. He believes, also, that it will relieve the manual training instructor of the necessity of draughting his own designs and making his own blue prints.

At least two different designs for each piece of furniture, and in the case of the more popular models, four different designs are given. This will allow such choice that no two models, identical in design, need be made in the same year. The student will find the lumber-list of great assistance, each piece listed there being lettered, as well as in the drawings themselves. All of the models can be made by a student of ordinary ability in a full year's course of from two to four periods each week.

Since the average student is not skilled in reading a working drawing, all dimensions in the plates are indicated *horizontally*, and not in accordance with the accepted conventions in the general practice of mechanical drawing.

In finishing a model, the use of a good oil stain with a good paste filler is recommended. After this, four coats of varnish should be applied. The varnish for interior woodwork should be of such a grade as to fill the following specifications:

Must be sufficiently pale not to discolor light woods.

Must work freely and flow out smooth.

Must dry free from dust in from two to three hours.

Must dry hard enough in twenty-four hours to take the next coat.

Must be hard and free from *tackiness* when dry.

Must be waterproof; that is, must be able to stand frequent washing without injury and must not turn white when wet. Panels on which good varnish has been used will stand one week's immersion without turning white (test to be made over black surface).

Must dry hard enough in forty-eight hours to be rubbed down to a flat finish, and, when rubbed, must not sweat out.

Must dry hard enough to be polished in from four to six days.

Must have sufficient toughness not to scratch white or show white when marred.

Must have elasticity and durability enough not to crack under ordinary changes in temperature.

The author wishes to express here his appreciation of the definite assistance in the way of criticism received from his colleagues during the preparation of this work, and also for the no less real help in the way of encouragement and inspiration given him by other friends, whose names, for professional reasons, he is not at liberty to mention here.

FRANK HALSTEAD

East Orange, N. J., September, 1913.
